

# ULTRA ACQUIRE SOFTWARE + DR WIRELESS

The Ultra Acquire Software + DR Wireless Panel provides exceptional image quality paired with advanced software features and functionality. The 14" x 17" cassette sized wireless panel uses enhanced imaging technology and has unique features like drop notification emails.

## Masterfully Designed

It is ideal for use in both new systems as well as retrofit rooms. The versatile panel is driven by the masterfully designed Ultra Acquire Software for the thoughtful image capture and optimized workflow efficiency. Ultra software + DR Wireless is available in both Cesium (CSI) and Gadolinium (GOS) Technologies.

Ultra's design elements were created with the purpose of allowing technologists the ability to manage and edit exams from one screen, improving workflow and more time to be focused on the patient.

## Ultra Acquire Software

Ultra Acquire Software's introspective workflow combines everything onto one screen, foldering implemented into the software allows users to navigate multiple studies within the single screen setup, saving time for the patient and technologist while creating imagery and workflow efficiency.

Features include procedure mapping, which allows for study types to have settings with specific and ordered views, as well as a customized set of image views to increase efficiency in the radiology experience for the patient.

Pediatric Imaging Software is supported by Ultra Acquire Software and implements a intuitive dose awareness that will default to procedures and assign technique changes based on the date of birth of the patient.

Ultra's ease of use and touchscreen capability are just a few of the countless customizable features that stimulates workflow and maximizes output.
